HardWired

Being in the electronic music industry since 1990 under various names, J.Askareli, Sp@am, dmE and now known as HardWired ak. Ghost rider and Damage. Since start they played a wide variety of electronic dance music. Back in days they were focused in techno and hard minimal. After successfully started radio-show named SoundPark which featured live performances and interviews with several world-famous Dj's, they started creating their own music, first for radio-purposes, but soon also for the dancefloors around the country.

The year 2004 marks the start of their collaboration with the dutch/slovenian DJ Rydel, and the release of various new and uplifting productions. Their first record released on well known German label Krach records (Krach003) was a big success in Europe.

After few years of producing loops, sounds and various tracks they realized that they just cant do any track without breaky parts in it. The progress in Breakbeat music also made a big impression on their studio work. The result of all that is that HardWired is now making mostly Brekbeat, Electro and D'N'B.

With their tracks they would like to present their view of modern electronic music, which consists out of more then just one style. Various influences like Industry, Dub and Drum'n'Bass make their productions driving and often creating a huge flowing climax in the middle of the tracks make their tracks ideal for the dancefloor.
