RIKKI

All species of garnets possess similar physical properties and crystal forms, but differ in chemical composition. RIKKI aka Goldmanite is a green or greenish-brown silicate mineral of the garnet group with a chemical formula of $\text{Ca}_3(\text{V}^{3+}, \text{Al}, \text{Fe}^{3+})_2(\text{SiO}_4)_3$. His sounds were identified deep in the underwater caves of the Orkney Islands, up in the north of Scotland, and was noted that inside the dark well-mineralized rocks were filled with vanadium clay and uranium deposits which gave them the deep green or brownish green colour. Like so many calcium garnets, RIKKI was found to be weakly anisotropic. DEEP GARNET RECORDS technicians travelled far-away to Ishimskaya Luka, northern Kazakhstan and came out with his "GANESH VS ZOMBIE REAGAN" single while another team of highly experienced scientists moved to Sayan Mountains, near Lake Baikal region of Russia to bring into the light his calcium, aluminium, iron and silicon remix for ABSTRACTION UNIT'S "MIDNIGHT RIDE" single. His cell edge is a unique blend of Deep-Breaks, Ambient drops, Tech minerals and Abstract irons as determined by x-ray powder diffraction analysis.

DGR006 ABSTRACTION UNIT "MIDNIGHT RIDE (with RIKKI remix)"

DGR011 RIKKI "GANESH VS ZOMBIE REAGAN (with FABRICS remix)"
