ADA MING

All species of garnets possess similar physical properties and crystal forms, but differ in chemical composition. ADA MING usually comes as a Grossular, a calcium-aluminium garnet with the formula $\text{Ca}_3\text{Al}_2(\text{SiO}_4)_3$, though the calcium in his quality of his Electro influenced Deep-Breaks music may in part be replaced by ferrous iron and the aluminium by ferric iron. The name ADA MING is derived from the botanical name for the gooseberry, grossularia, in reference to the green garnet of this composition that is found in Siberia. His awesome single "DECLINE OF THE WESTERN CIVILIZATION" includes cinnamon brown, red and yellow and because of its inferior hardness to zircon, which the yellow crystals resemble, it also have been called Hessonite from the Greek meaning inferior. The single was identified in Tanzania where was been called Tsavorite and carried with an extremely careful and dangerous process to DEEP GARNET RECORDS laboratories where its being transferred to one of our precious stones!
